Discourse2Draft

- Although numerous AI tools are being created every day that can be used to create structured content on a given topic, most of these tools suffer from issues of hallucination and lack of authentication.
- Discourse2Draft is an AI powered app to generate structured content for research manuscripts from a user provided topic (with optional context) with the ability to gather literature references in user intended format.
- In terms of usability, Discourse2Draft can wear many hats, such as scientific report generation, research proposal generation, manuscript writing, literature search or generation of content for any types of topic that has a user (or AI) provided structured outline.
- In addition, user can manage generated contents and download contents and bibliography in multiple formats.

Features

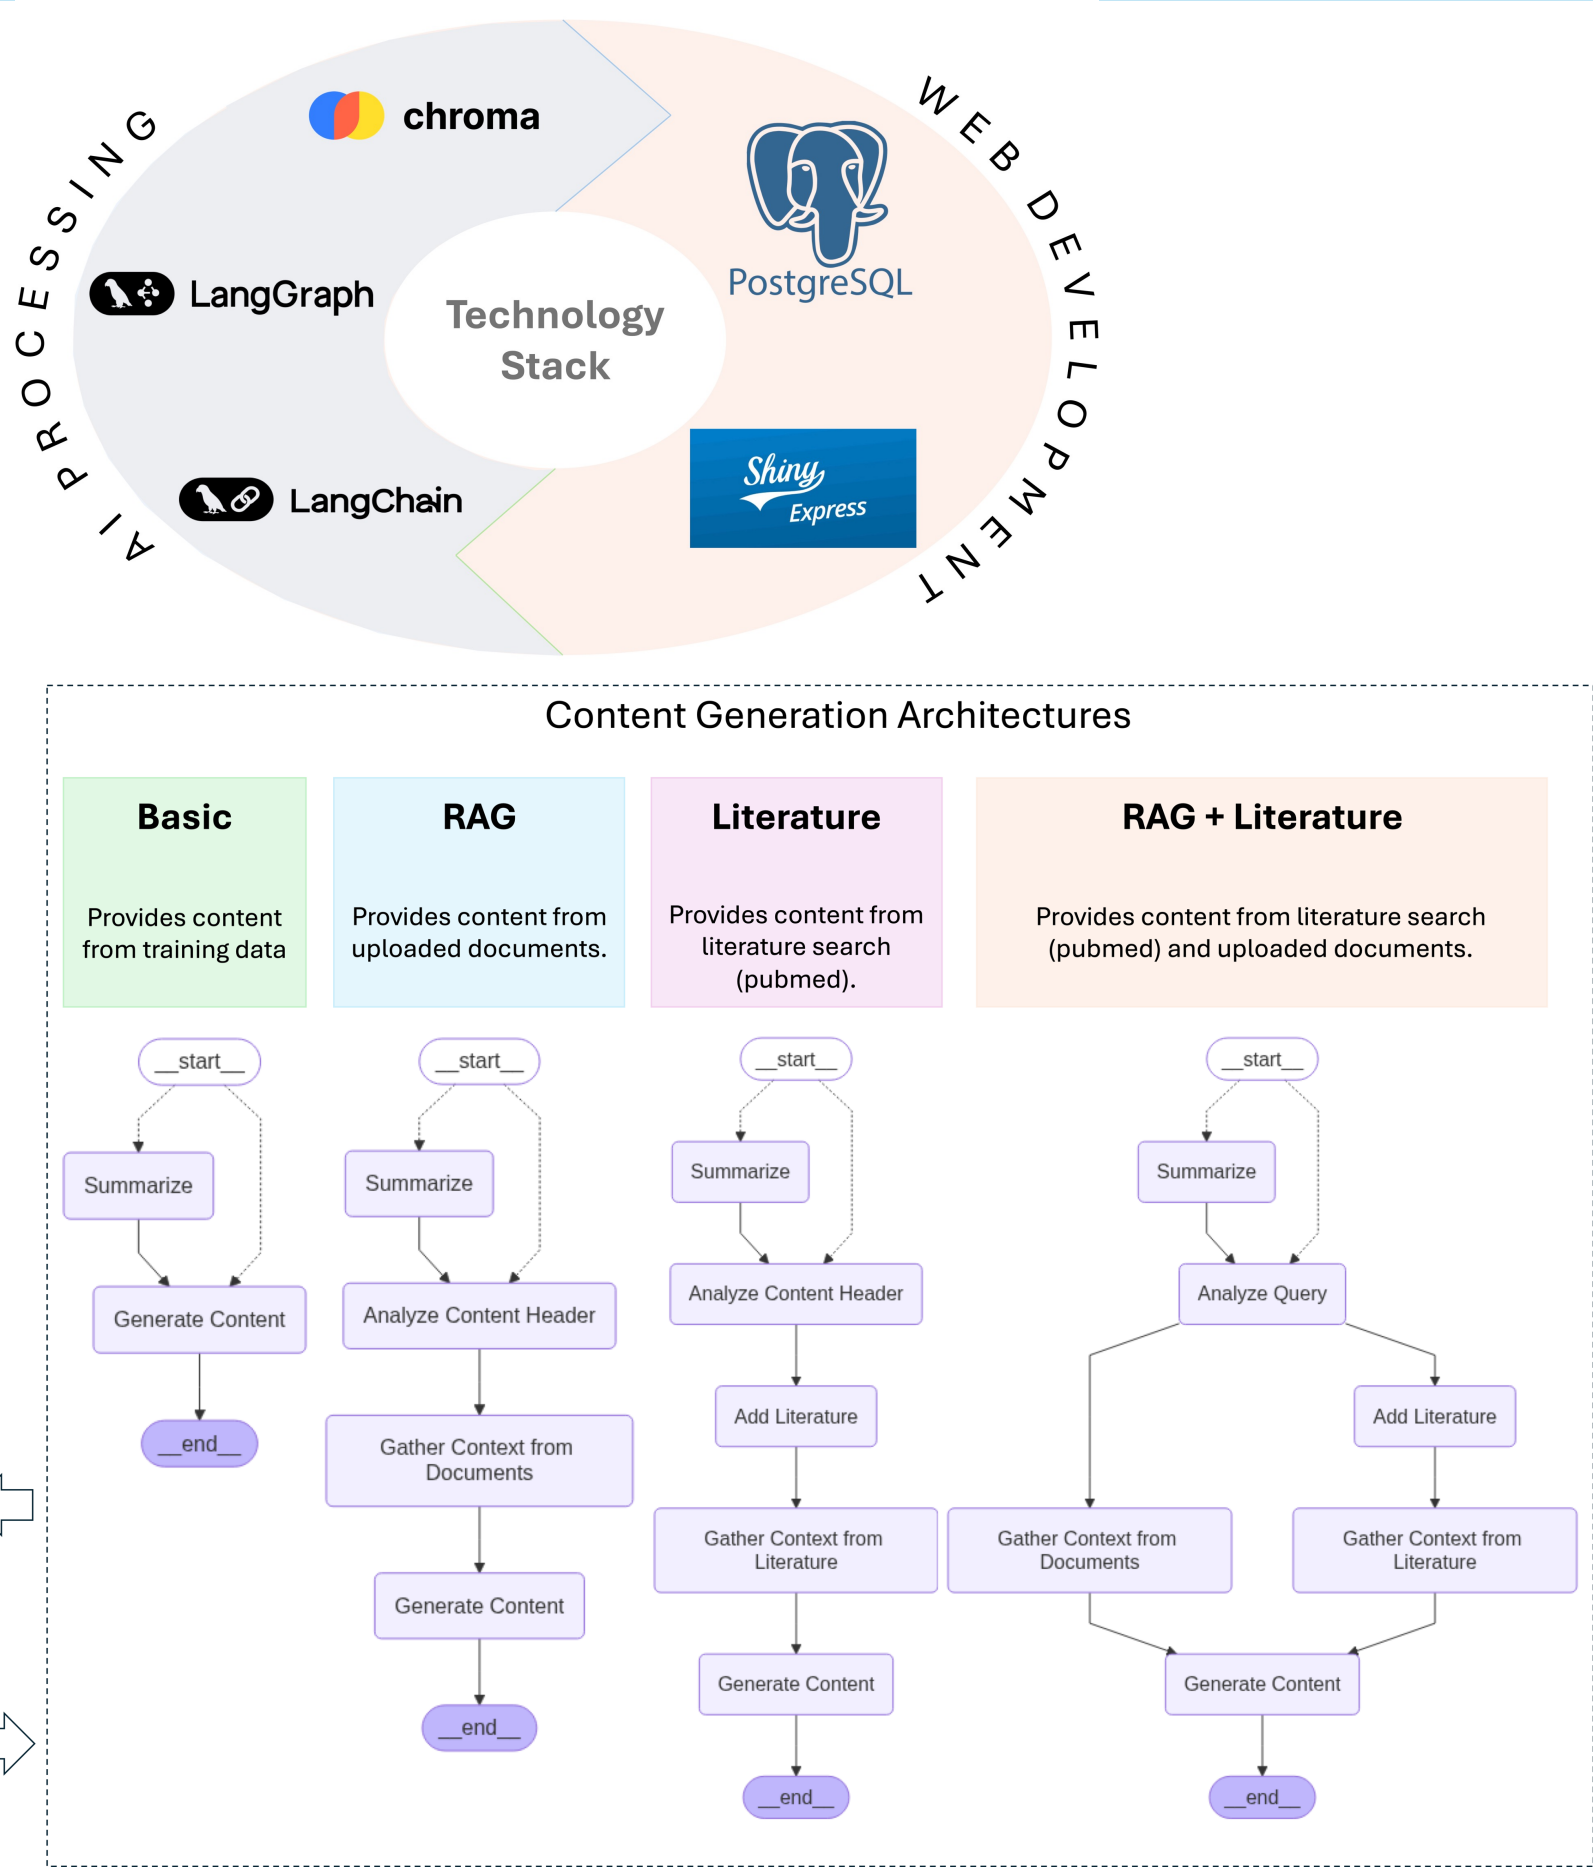

Content Generation

- Use AI base models from different providers: OpenAI, Google, Anthropic, Meta and Mistral.
- Generate document content with customized instructions.
- Regenerate paragraphs with revised instructions.
- Extract and cite content from user provided documents and/or from literature databases (e.g. pubmed).

Document Management

- Keep track of generated files in individual profile.
- Upload documents in multiple text formats: PDF, DOCX and TXT
- Download document in various formats (.md, .docx, etc.)
- Download bibliography of the cited sources in *bibtex* format.
